Year 1 Spellings

Friday 16th March

This week we have started looking at our phonics in a different way.

Instead at looking at sounds families where all the members have the same sound but different spellings, we have been looking at all the different sounds one grapheme (spelling) can make.

We have looked at:

i = find or tin
This grapheme can make the usual '*i*' sound or an '*igh*' sound.

o = hot or cold
This grapheme can make the usual '*o*' sound or an '*oa*' sound.

c = cat or ice
This grapheme can make the usual '*c*' sound or a '*s*' sound. We call it a *soft c*.

g = goat or giant
This grapheme can make the usual '*g*' sound or a '*j*' sound.

Knowing quickly the different sounds graphemes can make will help us become fluent readers. The more we spot n our reading, the more it will help our spelling. What words can you find this week?

Knowing quickly the different sounds graphemes can make will help us become fluent readers. The more we spot n our reading, the more it will help our spelling. What words can you find this week?

High frequency words: (Try spelling these correctly every time you write them)

Look back at all the words you have had so far. Pick out a few that you are still finding really tricky and practise these.

Reading words (try and read these by sight without sounding out)

Can you spot any of the words learnt so far in your reading book? Are you reading them without sounding out?

Blending is where we say all our sounds in a word separately and then try and say them together to create a word. It is really important we look out for all different members of the sound families. When sounding out.
